De-Wipe

PRODUCT DATA SHEET

DE-WIPE EQUIPMENT WASH

DESCRIPTION

De-Wipe Equipment Wash is the only scientific solution formulated to wash carcinogenic toxins in soot and smoke from your equipment, helping to prevent cross contaminants.

- **Reduces the Risk of Transmission**

Contaminated equipment can carry harmful pathogens, such as bacteria, viruses, and fungi. Washing effectively removes these pathogens, reducing the risk of transmission.

- **Maintains Personal Health and Safety**

Coming into contact with these harmful pathogens can lead to adverse health conditions.

- **Extends Equipment Lifespan**

Contaminants can cause damage to equipment over time. Regular cleaning and maintenance can help extend the lifespan of equipment, reducing the need for costly replacements.

- **Environmental Considerations**

Properly cleaning equipment can also be environmentally responsible. It can reduce the need for disposing of contaminated equipment prematurely. Harmful carcinogens in soot and smoke cannot be removed using standard equipment wash.

Smoke is more than an unpleasant odour; smoke contains contaminants. Failure to wash these off is hazardous to you and potentially contaminates your home.

De-Wipe Equipment Wash is the only scientific solution formulated to wash carcinogenic toxins in soot and smoke from your equipment, helping to prevent the spread of contaminants.

- **Instructions:**

Ratio 1:10 - Solution : water

(7 pumps = 10ml)

Dry with lint free cloth

INDUSTRIES SERVED

- Utilities and construction
- Industrial
- Aviation
- Plant machinery and construction equipment
- Fire and rescue service
- Chemical handling and carbon black production
- Police forensics and crime scene investigation
