

FLAIM ICM

Incident Command Training

Immersive training for Incident Command roles

FLAIM

Product Overview

Incident Command is a module of Trainer that enables role-based incident command training, allowing trainees to practice decision-making, communication, and coordination techniques within a team training environment. Trainees can step into leadership roles, manage resources, and direct firefighting efforts in realistic, immersive scenarios, whilst receiving immediate feedback on their performance. By simulating the challenges of real-world incident command duties, this module ensures leaders are prepared, confident, and capable of guiding their teams through critical situations.

- **Practice decision-making under pressure:** develop critical thinking and fast decision-making skills in high-stress, time-sensitive scenarios.
- **Clear communication skills:** Build strong communication habits to ensure information flows seamlessly across all command levels.
- **Enhanced situational awareness:** Train, coach or mentor participants to quickly assess situations, identify hazards, and make informed decisions
- **Supports up to and including level two Incident Command roles**

Benefits

Consistency across teams: Standardise training to ensure every team member understands their role and responsibilities during emergencies.

Performance tracking: Use data and analytics to assess leadership effectiveness and identify areas for improvement and skill gaps.

Reduced risk and cost: Minimise the dangers and expenses associated with live fire exercises while maintaining training effectiveness.

Remote on-demand training: Connect teams across locations in a role-based team training event. Incident Command and FTS removes the cost and logistics of traditional team training events.

Realistic scenarios: Experience life like emergency situations in a safe, controlled virtual environment to prepare for real-world incidents.

Hands-on skill development: Enable trainees to practice critical skills in realistic virtual environments to build confidence, refine techniques, and develop muscle memory.

FLAIM ICM

Incident Command Training

Immersive training for Incident Command roles

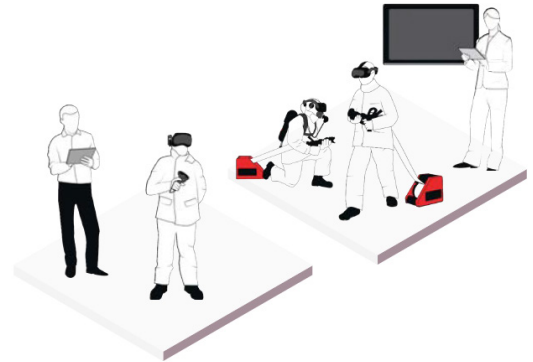

FLAIM

Training with Incident Command

Conduct your training event in one or multiple locations.
Set up Incident Command and Trainer in under 10 minutes.

Monitor and track performance:

- Initial size up
- Safety and risk assessment
- Allocation of resources
- Decision making (strategy and tactics)
- Communication

Capture data in real-time with Capture for seamless analysis and reporting.
Conduct a data-driven After-Action-Review for independent roles and teams.
Trainees can be observed complying to correct adoption of an organisations policies & procedures for complex and difficult to create scenarios.

Features

Radio communication: Simulate real-world radio communications for seamless coordination and command during training events.

Real-time scenario control: Trainers can dynamically adjust scenarios to challenge trainees and simulate evolving incidents.

Immersive VR Headset: Fully immerse trainees in realistic scenarios, enhancing situational awareness and decision-making under pressure.

Role-Specific Training: Tailored scenarios allow trainees to experience and practice the responsibilities of various leadership roles.

External speaker: Enable the trainer and the training event audience to witness and learn from team-wide coordination and scenario briefings.

Analysis & feedback: Capture data and insights on trainee performance to inform After-Action-Reviews and future training strategy.

Feels-real scenarios for role-based training

FLAIM have developed a library of team training material to support emergency response teams in achieving effective role-based training.

- Connect teams in a fully immersive scenario
- Build your own training modules
- Deliver relevant training playlists straight to trainees for quick setup and operation
- Review individual and team performance
- Conduct a thorough data-driven After-Action-Review
