## PAX EMERGENCY BACKPACK

### WASSERKUPPE L-ST-FT2

#### DESCRIPTION

The largest PAX Wasserkuppe with three side and two front pockets can be variably divided. It is suitable as a 2-backpack system. Order the centre panel and inner pouches separately.

On the front of the Wasserkuppe L-ST-FT2 PAX have integrated a very long, flat compartment in which you can accommodate a neck brace. Behind this compartment you access the separate document compartment via a side zipper.

The body of this backpack shows its true organisational talent. You can arrange the PAX inside pockets freely and easily within the body. The velcro strips sewn inside the back keep them securely in place. All around the body frame PAX have attached wide rubber band loops. With these you can stow masks for example. If necessary, you can remove the rubber band loops or replace them. In addition, PAX have attached flat clear bags in the frame so you have examination gloves for example, at the ready.

All PAX Wasserkuppe rubber band loops are marked either red for circulatory safety materials or blue for airway safety materials. In combination with the optionally available inner pouches, which are also marked in colour, this helps implement optimum organisation within your backpack.

With two handgrips the PAX Wasserkuppe can be carried sideways or lengthways. This bag also features reflective stripes on all five sides as well as the reflective PAX triangle for increased visibility.

#### FEATURES

- Product is fully reinforced and padded
- Compatible with PAX-Organising-System (POS)
- The shoulder straps can be removed if necessary

#### DIMENSIONS / WEIGHT
