

Wild Fire Front

The Gasworks Wild Fire training device is an Australian first, revolutionising bushfire training for service personnel and volunteer firefighters.

This cutting-edge system provides a safe and controlled environment to build critical skills, featuring an interlinked fire up to 20 metres wide and 6 metres deep. Optional gum tree components and fans simulate the intense conditions of a real bushfire, including unpredictable fire behaviour and shifting wind patterns.

As the first of its kind in Australia, this innovative training tool reduces the risks associated with planned burns, ensuring realistic preparation without endangering lives or property.

The Gasworks Wild Fire Front enhances response readiness, fosters teamwork, and builds confidence in high pressure situations. By equipping firefighters with advanced training devices, it sets a new standard for wildfire preparedness, strengthening Australia's frontline defence against bushfires and protecting communities.

Transportable

This device is palletised for easy transportation to metropolitan and rural locations.

Customised Set Up

Easily start and stop simulations from the control panel. Quick-connect fittings allows for multiple devices to be connected.

Australian Made

Our devices are engineered and manufactured in Queensland for Australian conditions.
